

Lesson: Practice 1

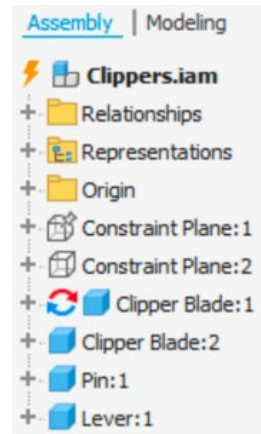

Practice: Exercise an adaptive component

- Review the adaptive elements.
- See results of changing the value of an adaptive relationship.

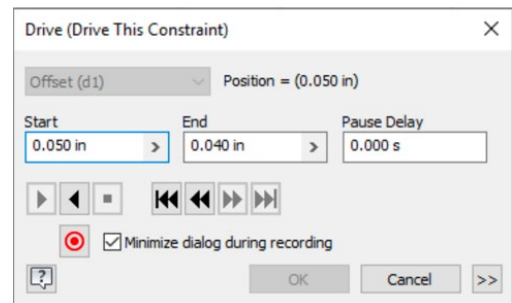

1. Open the *Clipper.iam* assembly.

2. Make the *Clipper Blade:1* component Adaptive.

3. Expand the relationships folder, locate the 'Drive This Constraint' Mate and right-click on it.
4. When the dialog appears click the play button to see what happens when the offset value of a work plane is animated.

5. The component is changed by its relationship to a work plane projected into the sketch.

Note: By modifying the position of the work plane the sketch is modified changing the model geometry.
