

# Practice Exercise 1

## Create a Parcel with Points

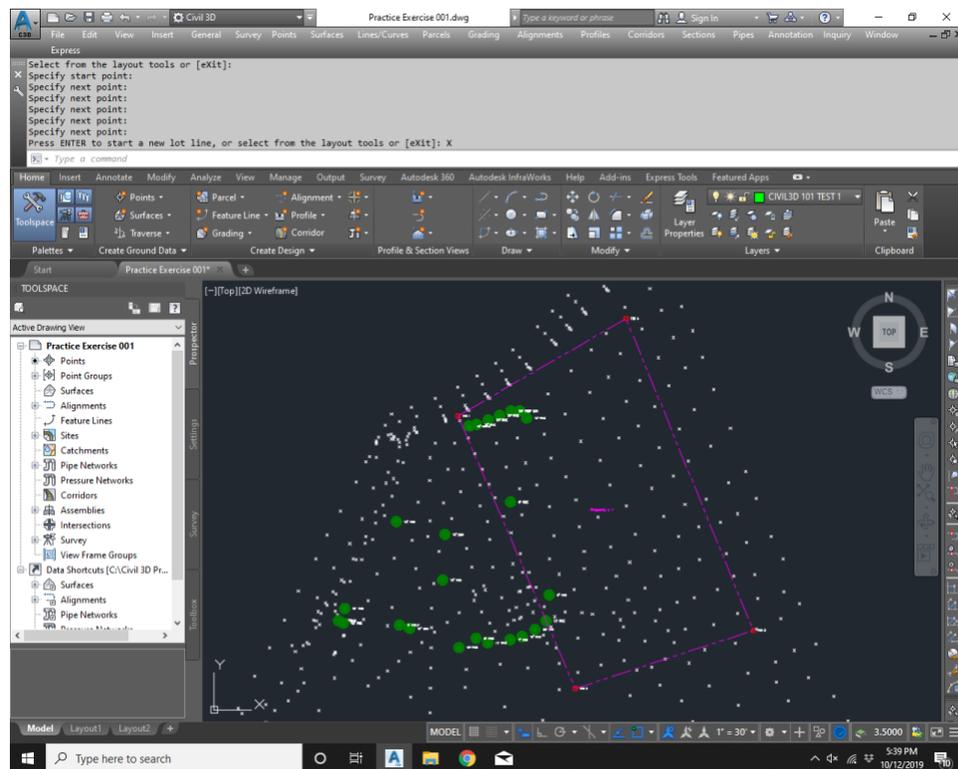

This exercise provides you with practice for creating a parcel with points. You'll use the concepts you learned in Lesson 1: Points, Parcels, and Surveying.

### Instructions:

1. Open the file **Practice Exercise 001.dwg**.
2. Import the point file **001-Point Import.txt** (PNEZD format).
3. Create a rectangular parcel using the points with a raw description FND.

The drawing should look like this:

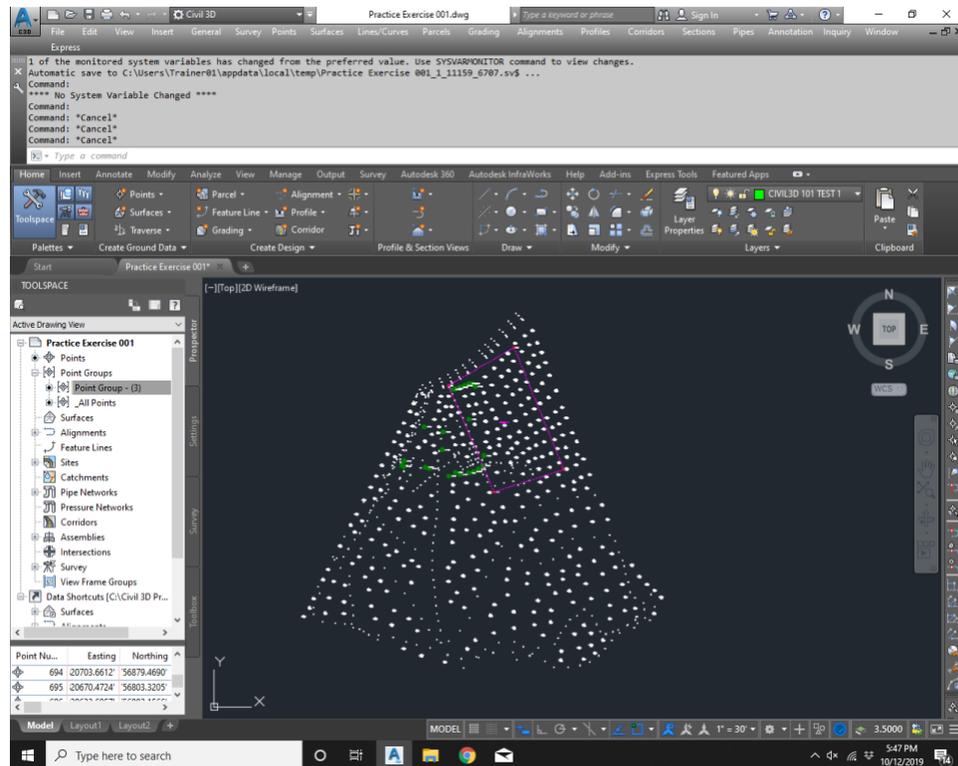

4. Create a Point Group for points with raw desc matching GS\*.

# Practice Exercise 1

## Create a Parcel with Points

The drawing should look like this:

**Once you have completed these steps, please answer the following questions (Precision 0.01):**

- What is the bearing and distance between FND 2 & FND 3?
- What is the area of the parcel?
- What is the perimeter of the parcel?
- What is the elevation of point #690?
